# CBRE DATA CENTRE SOLUTIONS

## Full Data Centre Lifecycle Solutions

360° Life Cycle Services

CBRE Data Centre Solutions provide strategies that encompass the full data centre lifecycle. These strategies minimize operational risk, reduce cost, and improve alignment between real estate and information technology functional units.

As the recognised leader in global data centre facilities management, CBRE Data Centre Solutions delivers 24/7 technical support to over a million sq ft of white space in Ireland and this equates to over 96 MW (megawatts).

With one of the highest industry customer retention rates of 96% our specialist services include strategic planning and needs analysis, site selection, disposition and acquisition, M&A Advisory, project and consultancy management, facilities and IT operations as well as valuations.

**SAVE AN AVERAGE OF 15% IN YOUR OPEX COSTS**

**REDUCE YOUR ENERGY COSTS BY UP TO 20%**

## Driven By The Need For Information Security In Ireland

SUPPORTED BY:

Data is one of the most valuable assets any business has today. Our dependence on information systems and services means organisations are more vulnerable to security threats than ever before. Keeping your data secure – whether its customer, staff or supplier data – is critical in most businesses, but most especially those dealing with sensitive data. Data security is a hot topic in the media so ISO 27001 not only protects your business against hackers but also safeguards your reputation.

## KEY BENEFITS TO YOUR BUSINESS

- Improves and maintains competitive edge.
- Win more business particularly where procurement specifications require higher IT security credentials.
- Compliance with legal, statutory, regulatory and contractual requirements.
- Provide assurance to stakeholders, such as clients and shareholders.
- Business continuity is assured through management of risk, security issues and concerns.

Mechanical, Electrical & Instrumentation Engineers & Contractors

OVER  
**300 MW**  
COMPLETED BY 2016

The Data Centre People  
[www.dornangroup.com](http://www.dornangroup.com)

Dornan Engineering is a European leader in providing MEI engineering and installation services in the Data Centre and Resilient Infrastructure sector. We are the “go-to” engineering contractor for global blue chip companies owing to the engineering and installation excellence they receive when working with us. To date we have completed up to 306MW in datacentre engineering and installations and by the end of 2017 this will rise to almost 500 MW. We are the engineering contractor of choice because we offer much more than an installation service. We are different because we offer a high quality engineering service, which not only serves to ensure a seamless progression to the installation phase of the project but that also adds value to the engineering design process at the pre-construction phase of projects.

Our Engineering Capabilities include;

Mechanical, Electrical and Instrumentation Engineering Design & Build from Concept stage, in conjunction with our specialist design partners,

Mechanical, Electrical and Instrumentation Engineering Design Management,

Lead MEP Coordinator on projects,

Providing Tailored and Bespoke Engineering Solutions,

Value Engineering Reviews and proposals,

On-Site and off-site engineering support to suit project demands,

Whole life cycle BIM Services, including 2D and 3D CAD services,

Management of FAT and SAT processes to ensure engineering and technical compliance,

Design for Manufacture and Assembly – Pre-Fabricated Services Modules,

Developing and Engineering Services and Systems Integration,

Production of engineering details for construction purposes,

Production of engineering details for the purposes of quality benchmarking engineering installations.

Why choose Dornan?

We are the “go-to” contractor for global Blue Chip Companies who continually retain our services,

We can offer a complete engineering service, from concept stage through to post completion,

We are investors in people and are focused on continually strengthening our Engineering Capability, staying abreast of the latest trends and technologies in the sector,

We are Leaders in Safety and Quality, continually setting higher benchmarks and setting standards for others to follow,

We are attuned to the engineering, safety and regulatory requirements of Countries across Europe,

We are experts in BIM development, collaboration and experienced Lead MEP services Coordinators,

We work as part of the overall project team to ensure successful project delivery to our clients.

# Info Sec set to host top cyber-security experts

A gathering of leading cyber security experts takes place in Dublin next month. The Dublin Info Sec 2016 conference will discuss major issues affecting Irish business including cyber fraud and hacking - particularly the danger posed by hackers to senior executives.

The average cost of fraud to organisations in Ireland has increased from €498,000 in 2014 to €1.7m, with the incidence of cyber attacks almost doubling since 2012, according to a recent PwC report.

'Whaling the C-Suite' is first up on the agenda, exploring how senior executives are making themselves vulnerable to hackers. Amongst those topping the bill at the conference in the RDS is Dr Mary Aiken - the expert on which the US TV series CSI: Cyber was based. Dr Aiken will profile the insider threat for businesses of fraud and allowing access to hackers. She will also host a workshop for executives attending Dublin Info Sec. She is one of the speakers on the theme of 'Human Factors in Cybersecurity'.

Also on the day, there will be further thought-provoking debate from key industry leaders focusing on the threat to Irish businesses and the State from cyber attacks.

Joseph Carson will detail Estonia's experience of a concerted cyber attack in 2007 when the country's banks, ministries, media and parliament all suffered denials-of-service. Could the same happen here and how prepared are we for it?

Other themes include an interview with WikiLeaks journalist Sarah Harrison followed by a panel discussion asking 'Whistleblower: Champion or Saboteur?' which promises to be a provocative debate about the actions of

WikiLeaks and whistleblowers in general.

The conference, which will be opened by Tanaiste and Justice Minister Frances Fitzgerald, promises to be important for key influencers and industry thought-leaders in the area of cyber crime and aimed at 'C-suite' and senior business executives.

Conference attendees are eligible for up to 8 CPE credits from the relevant awarding bodies. Tickets for the event, organised by INM, can be purchased online at [www.independent.ie/infosec2016](http://www.independent.ie/infosec2016).

## Energy at work for you

Delivering your business energy

**DATA CENTRE VALUATIONS INTERVIEW**

Mark Acton is the Critical Services Director for the newly formed Global Data Centre Solutions business at CBRE. Data Centre Solutions (DCS) offers the delivery of data centre specific facilities management and engineering

Services to customers as well as a large range of IT and technical services, accreditations, risk reviews, diligence reports and genuine world leading thought leadership.

**Why does the sector continue to grow despite economic downturns and IT consolidation?**

IT footprint is getting smaller but demand is being sustained by the ever increasing growth in the consumption of IT services and the ubiquitous dependency on IT and communications services in general. These are all ultimately based in data centres somewhere.

**Why is there such a focus on energy efficiency?**

The power density of a modest data centre is 100 times more than that of a large commercial office building. A large data centre may have the capacity to use as much electrical energy as a small town. Electricity is by far the greatest operating cost of any data centre and yet currently greater than 99% of all electrical energy consumed by data centres is rejected into the atmosphere as waste heat. The sector has made huge strides over the last 5 years to significantly improve energy efficiency, but there is an increasing recognition that unless we can demonstrate the energy improvements across the sector there is an inevitable spectre of inappropriate and hasty government legislation around the corner.

**We hear a lot about data centre standards and standards development - Why?**

The data centre sector is arguably less than 25 years old and yet data centre operators in particular are extremely keen to differentiate themselves by aligning with recognised and accepted standards.

Unfortunately there are few (if any) true standards that are globally accepted. Development of recognised genuine international standards is therefore still important and there continues to be something of a concerted effort in this area. I am very closely involved in the development of the new European EN 50600 series of data centre standards being created by CENELEC, and am also the editor of the European Code of Conduct on Data Centre Energy Efficiency, which is also sponsored and supported by the European Commission .

**What about The Cloud?**

Cloud based services are having an impact on data centres, but rather than reducing demand as some suggest it is actually increasing demand, particularly in the data centre collocation market. Ultimately the cloud still needs to be housed somewhere, so it could be described as merely "somebody else's data centre" as opposed to your own. The big change that Cloud type data centres are likely to bring is a progressive move away from the current dependency on building infrastructure for resilience / service continuity. This may be achieved both within the IT hardware and application layers but there is an increasing focus on application level resilience based on the examples being set by the hyper-scale deployments from IT Infrastructure firms. This will ultimately result in data centres becoming less bespoke and more commoditised with simpler infrastructure requiring less management.

**What are the big developments in the sector ?**

I am sure that there will be continued growth in the data centre collocation market and considerable opportunity in the space globally. The data centres being built moving forward will certainly be designed to have more energy efficient infrastructure. Cooling systems in particular will be universally designed to take advantage of low outside ambient temperatures, however the big energy efficiency gains are now largely to be made with the data centre IT infrastructure itself (hardware utilisation and software efficiency), rather than the building infrastructure. The supporting mechanical and electrical infrastructure in a data centre is likely to become less complex and less resilient.

# ELECTRICAL MECHANICAL CONTROLS

## Your Partner In Cost Reduction

Partnering with Global Manufacturing to provide our clients with leading technologies to reduce operating costs, improve efficiencies and enhance working environment.

### Thermal Equalisation and Destratification:

Winner of Best Indoor Air Quality Product at SEAI Energy Show 2015 and 2016

#### BENEFITS:

- Reduces Heating Costs by 20% to 50%
- Reduces Cooling Costs by 20% to 50%
- Ensures Optimum Environmental Working conditions
- Reduces CO2 emissions by 20% to 50%
- Can be installed in New and Existing builds
- Reduces volume of Mechanical components required in New Build
- Works alongside all types of HVAC systems
- Low Wattage Fans, starting at 12 Watts
- Stand alone or BMS integrated.

### SMISSLINE TP

The finger-proof pluggable system for line protection

SMISSLINE TP is the complete line protection solution for applications with high availability, easy and fast installation and maintenance requirements:

#### MAIN BENEFITS

- Safety: The SMISSLINE TP plug-in socket system allows for load-free plugging in and unplugging of live devices and components without additional personal safety equipment for protection against electrical hazards.
- Save of time thanks to the plug-in devices and save of space in the control cabinet thanks to the vertical installation of the bus-bars socket
- Easy and quick maintenance of the switchboard: input wiring is already integrated in the plug-in socket system, thus the installation is better arranged and tidier to be checked, even by non-qualified personnel
- Flexibility, expandability and availability

PRESS FITTINGS SYSTEMS:

**Many different applications, result reliability**

#### BENEFITS:

- Exceptionally Fast Joining Method, 30% to 50% reduction in Labour
- No Hot Work Permits Required
- Eliminates Leaks; Ideal for Steam, Compressed Air, Water
- Reaches Full structural Integrity immediately.
- Copper, Stainless Steel, Carbon Steel and Copper Nickel versions
- Available from 1/2" to 4"

Pressfitting is a unique method to make installations inside different sectors, civil and industrial as well. Among the house walls, for example, Pressfitting can be used for potable water pipes, heating and gas. At the industrial level, Pressfitting is suitable for compressed air, cooling/heating, process water and fire-fighting systems.

# ELECTRICAL MECHANICAL CONTROLS

## Your Partner In Cost Reduction

Established in 2001 Electrical Mechanical Controls Ltd. is an engineering services company supplying leading technologies and services throughout Ireland. The company has partnered with International manufacturers of innovative and cost effective solutions working closely with clients in introducing these technologies.

The products and services available through Electrical Mechanical Controls Ltd. include:

- Energy saving technologies,
- Facility & Utility solutions
- MRO and Engineering components.

The customer portfolio of Electrical Mechanical Controls Ltd. spans the Industrial, Pharmaceutical, Retail, Commercial and the Public Sector.

At Electrical Mechanical Controls Ltd. we clearly understand the importance of supplying high quality products with proven technologies. We match this with

a service commitment to our clients to ensure complete support in all their needs.

The benefits of Electrical Mechanical Controls Ltd. providing tailored solutions to our customers' requirements include:

- A reduction in operating costs
- Improvements in workplace and environmental conditions
- Reductions in downtime and maintenance costs
- Assistance in meeting Green and Energy commitments

Based on information from our suppliers and customers satisfaction, we are confident we have a product range that will provide Energy Saving and Process Enhancement solutions to the Data

Centre Sector. We will be showcasing these at the upcoming Data Centre Exhibition at the RDS.

We will have product specialists available to discuss any applications you may have.

EMC Ltd., Unit 7, Westlink Commercial Park, Oranmore, Galway – P: 091 483651; F: 091 483656; E-mail:sales@emcs.ie; Web: www.emcs.ie

# Home Grown World Class Data Centre Cooling

GREEN DATA CENTRE SOLUTIONS = LOCAL DATA CENTRE SOLUTIONS

EDPAC provides innovative energy saving and free cooling solutions for data centres including free cooling air handling and free cooling computer room systems. All engineered and manufactured in Carrigaline, Co. Cork. Both direct and indirect options are available.

- Easy access to primary components

- Modular design 50 to 400kW

- High Efficiency Plate or Thermal wheel exchanger

For enquiries please contact  
**DAVID BOURKE**  
david.bourke@edpac.com  
+353 21 4372850

- Direct fresh air free cooling using induced external ambient air
- Indirect air to air free cooling using high efficiency heat exchangers
- Air to fluid free cooling using drycoolers or free-cooling chillers feeding high efficiency close control units
- High efficiency CRAC units ranging from 5 to 200kW modules. Chilled water, Dual coil and the latest technology DX options available incorporating EC fans and VSD compressors

EDPAC International Ltd. Carrigaline Industrial Park, Carrigaline, Co. Cork, IRELAND

**EXCELLENCE IN ENGINEERING & EFFICIENCY**

# LEGACY DATA CENTRES

## – upgrading the cooling capabilities

By Pat Gillan, Data Centre Sales Manager at Weatherite Air Conditioning Ltd

Cooling equipment installed some 10 or more years ago within a comms room, server room or data centre will, in most cases, be coming to the end of its useful life and as a result could be creating problems for IT Managers/FM maintenance specialist responsible for their efficient, continual, safe operation.

**M**any of these legacy data centres are probably cooled using CRAC (Computer Room Air Conditioning) cooling units. These traditional cooling solutions monitor and maintain the temperature and humidity within the IT white space, operating on a continual basis.

However, data centre cooling technology has advanced considerably over the last 10 years and ASHREA has set out a number of recommended standards and guidelines for the data centre industry, aimed at delivering a more energy efficient solution.

50kW cooling units in operation at a Tier 3 data centre.

Efficient energy usage also plays a large part in any IT critical environment and, as the cooling solution could account for up to 60% of the data centres energy costs, delivering a substantial reduction in cooling expenditure can only be good news for the Data Centre Manager.

So, what are the options when looking at improving/upgrading the cooling capabilities within a legacy data centre?

### Option 1 - Refurbishment

Generally, the refurbishment of an old CRAC cooling system would require the replacement of most of the unit's internal mechanical components, from the belt driven fan/motor assembly to the cooling coil. Also, if it's a direct expansion (DX) solution, the compressor could be operating on a non-compliant R22 refrigerant which

would need to be rectified immediately. The existing control system would also need to be updated.

Consequently, unlike other commercial air conditioning plant, which can be economically refurbished to meet current 'comfort' cooling demands, refurbishing legacy data centre CRAC cooling units can be a very expensive operation and may not actually provide the most cost effective, energy efficient solution for a Legacy comms room/server room or data centre.

### Option 2 – Replacement

This option provides an opportunity to actually replace outdated, inefficient capital plant with a more modern cooling system, which will be fit for purpose i.e. has the required cooling capacity to suit existing and, if necessary, planned expansion of the IT load.

Providing a 'replacement' solution also allows the data centre professional to consider a number of options- aimed at providing the optimum, long-term solution. Although the existing CRAC units could be replaced with new, modern alternatives, these would again be air circulation only and still have a limited cooling capacity. However, if direct replacement units were considered they could be designed with dimensions to suit any site constraints, providing enhanced cooling capacity, plus they could incorporate energy efficient solutions.

Advances in cooling technologies for data centres have progressed substantially over the last few years which, in association with enhanced and environmental resilient IT chip design, has enabled the EU Code of Conduct and ASHREA to recommend higher operating temperatures in Data Centres, permitting the application of cooling systems less dependent upon mechanical compressors that was only previously possible in telecommunication rooms.

At Weatherite we appreciate the fact that every comms room, server room and data centre is different and that each requires a cooling arrangement designed to deliver the best possible solution, whether that be Ambient air free cooling, Direct or In-direct Adiabatic systems, in-row cooling or conventional recirculation air handling units.

Option 3 - Consider the addition of containment

The benefits of adding a Cold Aisle Containment (CAC) or a Hot Aisle Containment (HAC) solution are well documented and offer additional benefits, particularly within existing data centres - ensuring the dedicated cooling air flow is directed to the IT heat- eliminating conventionally incurred room losses and improving temperature control efficiency.

### Energy usage within Legacy Data Centre's

The question of energy consumption is high on everyone's agenda these days, particularly within the IT critical sector. Any solution that can reduce mechanical cooling to a minimum, thus delivering substantial cost savings, needs to be carefully considered. Fresh air free cooling and adiabatic cooling options can offer vastly reduced running costs not only for the data centre itself, but also for controlling the heat output from the supporting UPS plant.

### Delivering the right solution for each individual legacy data centre

Weatherite are experts in delivering data centre replacement cooling equipment as well as new build D.C. applications- delivering a technically advanced, energy efficient, low PUE configuration.

For more details go to [www.datacentre-cooling.com](http://www.datacentre-cooling.com)

60kW replacement free cooling units being manufactured.

# Welcome

Welcome to DataCentres Ireland.

The amount of electronic data that we store is growing exponentially, as is our reliance on that data. However the storage and processing of this data costs... With energy prices rising and our growing needs for resilient and robust IT platforms... ensuring you have the right solution for your organisation is vital and will continue to be so.

## DataCentres Ireland

Whether you're running a couple of stacks, a nationwide network of comms rooms, a small datacentre or a hyper-scale datacentre, you face similar challenges: to operate more sustainably, boost efficiency whilst cutting costs... All without compromising speed, resilience, security or service.

The theme of this year's DataCentres Ireland "Infrastructure – Services – Solutions"

This is your event and your opportunity to; network with industry leaders and suppliers; to increase your knowledge and gain new ideas; see the latest in technology, services and solutions that can help you.

## The Exhibition – Showcases the Latest in Products, Services and Solutions

The DataCentres Ireland exhibition features over 60 of the most active and dynamic exhibitors representing over 150 companies. This is your opportunity to see the latest in technology, products, services and solutions that can assist you.

Take the time to meet each exhibitor and discuss your needs... you'll be surprised at what is out there.

## Expanded Conference Programme

This year's conference has been expanded and features over 60 speakers and panellists addressing the key issues affecting the datacentres internationally and especially those within Ireland.

This expanded programme means that as well as addressing practical issues we shall also be looking at new areas such as: regional development, financing of new builds, Open Compute, Brexit, Safe Harbor 2 and much, much more.

## Host In Ireland – Sponsored Content

Held on Day 2 in Conference Room 2, is a stream sponsored by Host In Ireland entitled **"For Ireland The Data is the "Why", The Centre is the "How"** and will include keynote addresses and panel discussions, featuring Host in Ireland Executive and Advisory Council members along with selected global industry leaders.

On behalf of the entire team, I would like to thank exhibitors, speakers and supporters without whose active support these events would not happen.

Finally, may I wish you an enjoyable, interesting and successful visit to DataCentres Ireland.

**Hugh Robinson**  
Exhibition Director

**Ps: Save the date – DataCentres Ireland will once again be held in November 2017 at the RDS.**

For more information visit: [www.datacentres-ireland.com](http://www.datacentres-ireland.com)

# Cooling Solutions

## from the Data Centre Experts

With a reputation for delivering exactly the right solution for each individual Data Centre, we understand the importance of keeping critical IT technology cool - 24 hours a day, every day.

# DataCentres Ireland Conferen

**TUESDAY 8 NOVEMBER 2016. RDS, DUBLIN**

**10.00 DataCentres Ireland Opens**

## Conference Room 1

### Energy & Sustainability

Chair - Prof. Ian Bitterlin, MD, Critical Facilities Consulting

- 10.30 - 11.00 **Irish Energy Overview - The Challenges and Opportunities**  
*John Fitzgerald, Director, Grid Development & Interconnection, Eirgrid Group*
- 11.00 - 11.30 **How large energy Providers can work with DC's to reduce consumption and increase the % of Renewables**  
*John Walsh, General Manager, Smart Energy Services, ESB Innovation*
- 11.30 - 12.00 **Data Centre Circular Economics - How to achieve optimal financial return & maximum sustainability levels from end of life IT**  
*Mike Higgins, Chief Sales & Marketing Officer, Wisetek*
- 12.00 - 12.45 **Panel Discussion - DC's and Renewable Energy Sources the options**  
  
Panellists - ● Brendan Heneghan, Interim Chief Executive, Irish Wind Energy Association (IWEA)  
● John Walsh, General Manager, Smart Energy Services ESB Innovation ● John Reilly, Head of Powergen Development, Bord Na Mona  
● Brian McDonagh, CEO, Ecologic Data Centres

## 12.45-14.00 Exhibition Viewing - Lunch

Chair - Prof. Ian Bitterlin, MD, Critical Facilities Consulting

- 14.00 - 14.30 **Standby Generation: Securing your DC and the Grid**  
*Paddy Finn, MD, Electricity Exchange*
- 14.30 - 15.00 **Case Study - How ISO 50001 Compliance can effect real Energy Savings**  
*Alan Freeman, Veolia - (e-Bay Inc.)*
- 15.00 - 15.20 **Onsite Power Generation - Improving Energy Efficiency & Security of Supply**  
*John Curley, General Manager, Clarke Energy*
- 15.20 - 15.40 **Power and Efficiency - Could controlling what we're running in the DC, now deliver greater savings than improved cooling and operational issues.**  
*Damian Dalton, CEO, Stratagica Ltd & Assoc. Prof., School of Computer Science, UCD*
- 15.45 - 16.30 **Power Panel Discussion**  
Panellists: ● Paddy Finn, MD, Electricity Exchange  
● John Curley, General Manager, Clarke Energy  
● Johnathon Fitzpatrick, Exemplar Energy  
● Damian Dalton, CEO, Stratagica Ltd

## Conference Room 2

Chair - Vincent Byrne, Vincent Byrne Consulting

- 10.30 - 10.50 **DC Thought Leadership in Open Compute - What is it?**  
- Where is Open Compute now and where is it going?  
- What might the impact of Open Compute mean to DC's  
*John Laban, European Representative, Open Compute Project (OCP) Foundation*
- 10.50 - 11.10 **Bringing 'Open Compute' efficiencies to the Enterprise Datacentre**  
*Keith Sullivan, MD, CS Squared*
- 11.10 - 11.25 **Q&A**  
*John Laban, European Representative, Open Compute Project (OCP) Foundation and Keith Sullivan, Managing Director, CS Squared*
- 11.30 - 12.00 **Direct Liquid Cooling - Is this the future? + Case study of the Triton Project**  
*Jim Hearnden, EMEA Data Centre Power & Cooling Technologist Dell EMEA Enterprise Solutions & Networking*
- 12.00 - 12.30 **Flash Storage and DC's - Is not replacing conventional hard drives with flash storage just a false economy**  
*TBC*
- 12.30 - 13.00 **Blockchain - The opportunities for the Financial Sector**  
*Mark Steele Head of IT, UK, BayernLB*

## 13.00-14.00 Exhibition Viewing - Lunch

Chair - Steve Hone, Co Founder, Data Centre Alliance

- 14.00 - 14.30 **The impact on Datacentre Efficiency through the correct use of UPS Technology**  
*Russell Bulley Technical Support Manager, Emerson Network Power*
- 14.30 - 15.00 **Legacy DataCentres optimisation and its impact**  
*Kevin Burke, Senior Mechanical Engineer, Arup*
- 15.00 - 15.30 **Boosting Efficiency with a single Datacentre Management Solution**  
*Aengus Nolan, Data Centre Manager - Intel Ireland*
- 15.30 - 16.00 **Rethink your data centre financing: Discover innovative investment solutions.**  
*Jonas Caino, Head of UK Sales, ETIX Everywhere*
- 16.00 - 16.30 **Panel Discussion - Codes Of Practice & European Standards - Impact and implications of EN5600, ASHRAE 90.4 & Certification**  
Panellists - ● Mr Mark Acton, Critical Services Director, CBRE Data Centre Solutions  
● Vincent Byrne, Vincent Byrne Consultant  
● Lance Rütimann, Vice President, The Green Grid

**17.15 DATACENTRE IRELAND - NETWORKING DRINKS RECEPTION IN THE EXHIBITION HALL**

For more information visit: [www.datacentres-ireland.com](http://www.datacentres-ireland.com)

# ce Programme

**WEDNESDAY 9 NOVEMBER 2016. RDS, DUBLIN**

**10.00 DataCentres Ireland Opens**

## Conference Room 1

- 10.15 - 10.45 **The Green Grid - What is it? And how you can benefit from being involved**  
*Lance Rütimann, Vice President, Green Grid*
- 10.45 - 11.20 **The EU Commission EURECA Project, reasoning about hardware refresh rates in Data Centres**  
*Dr Rabi Bashroush, Distributed Systems and Software Engineering, Director of the Software Architecture Research Group, UEL*
- 11.20 - 11.45 **The Government Challenge - Cloud v's Data Centre**  
*Tim Willoughby, CTO, Local Government Management Agency*
- 11.45 - 12.15 **Case Study - How moving from AC to DC can improve efficiency**  
*Phil Hardy, BDM, Eltek*
- 12.15 - 12.40 **Case Study - The Benefits of Co-ordinating Information for the whole building & asset lifecycle**  
*Kieran Beggan, Chief Operations Officer, IFS*
- 12.40 - 13.05 **Case Study - What are the Benefits of and what does it take to achieve to ISO 27001**  
*Conor Fitzgerald, Lead Assessor ISO27001, Certification Europe*

## 13.05-13.45 Exhibition Viewing - Lunch

Chair - Mark Acton, Critical Services Director, CBRE Data Centre Solutions

- 14.00 - 14.30 **"Cooling - Which one is right for you?"**  
*Craig MacFadyen and Simon Young, Munters Ltd*
- 14.30 - 15.00 **How the use of prefabricated data centres can increase speed to operations, increase flexibility and reduce energy and overall costs**  
*Mark O'Sullivan, Data Centre Sales Director, Flexenclosure*
- 15.00 - 15.30 **Case Study - Improving Legacy Data Centre Efficiency and the associated benefits/pitfalls**  
*Pat Gillan, DC Manager, Weatherite*

## Conference Room 2

Sponsored By

### For Ireland The Data is the "Why", The Centre is the "How"

Sponsored by "Host In Ireland" element of the conference will include keynotes addresses and panel discussions, featuring Host In Ireland Executive and Advisory Council members along with selected global industry leaders.

- 10.00 - 10.15 **Market Evolution and is the Growth Sustainable**  
*Garry Connolly, President, Host In Ireland*
- 10.15 - 10.55 **Global Megatrends / Opportunity or Risk to Ireland**  
Moderator: ● Nicola Hayes, CEO, Andrastra Consulting UK  
Panellists: ● Terry Gillick, President, Primary Intergration  
● Cronan McNamara, Founder & CEO of Creme Global, Chair of Irish Software Association, Founder of The Predict Conference  
● Donough Roche VP Global Sales Engineering, Digital Reality
- 10.55 - 11.15 **Data Protection - General Dataprotection in Europe (GDPR)**  
*Philip Nolan, Partner, Head of Commercial Law, Mason Hayes & Curran*
- 11.15 - 11.55 **Panel Discussion - Global Data Growth - a National Opportunity for Ireland**  
Moderator: Barry Rhodes, CEO, INEX  
Panellists: ● Jerry Sweeney, MD, Cork Internet Exchange  
● Fergus Innes, RVP Europe, Hibernia Networks ● Shane Nolan, Head Consumer Content & Business Services Division, IDA
- 11.55 - 12.30 **Panel Discussion - Energy & Ireland**  
Moderator: ● David McAuley, Climate Friendly  
Panellists: ● Vincent Barra, Vice-President Ireland Datacenter & IT Business, Schneider Electric ● James Wilman, Chief Executive Officer, Future-Tech ● Emma Fryer, Associate Director, Climate Change Programmes, techUK  
● Alice Whittaker, Partner, Philip Lee Solicitors

## 12.30 - 13.15 Exhibition Viewing - Lunch

- 13.15 - 13.55 **Panel Discussion - "The Industrialisation of the Data Centre", is creating, retaining and attracting talent now the number one issue?**  
Moderator: ● Peter Hannaford, MD, Datacenter People  
Panellists: ● Tommy Fitzpatrick, Global Account Director, CBRE Data Centre Solutions Ireland ● Tanya Duncan, MD, Intension Ireland Limited ● Dr Theresa Simpkin Head of Department, Lord Ashcroft International Business School
- 13.55 - 14.10 **Standards and Compliance, Industry needs to be trusted**  
*Noel O'Grady Business Development Manager, Sungard Availability Services*
- 14.10 - 14.45 **Financing of DC and Infrastructure Projects**  
Moderator: Diane Hodnett, CEO, Information Technology & Services  
Panellists: ● Eddie Kilbane, CEO, Dataplex  
● Gary Watson, General Manager for Ireland, Keppel Data Centres  
● Mark Petridge Managing Director - Digital London Ltd
- 14.45 - 15.30 **50 Billion Connected Devices by 2020, The Why and the How**  
*Phil Lawson-Shanks and title Chief Architect & Vice President of Innovation, EdgeConnex*  
Moderator: Ambrose McNevin, Editor in Chief, CBR online.com at Progressive Digital Media Group  
Panellists: ● William G. O'Connell, MD, DCoD Europe, CommScope  
● Ken Finnegan, Chief Technology Officer, IDA Technology Ireland  
● Philip Nolan Partner, Head of Commercial Law, Mason Hayes & Curran
- 15.30 - 15.45 **Garry Connolly: Closing Remarks and Takeaways**
- 15.45 - 19.00 **Host In Ireland - Drinks Reception - Location Upstairs at the Bridge 1859, Ballsbridge Bridge Dublin 4.**  
Supported by Datacenter People

HIGHEST AVAILABILITY, MAXIMUM EFFICIENCY  
OR FASTEST RETURN ON INVESTMENT?  
...HAVE IT ALL.

# THAT'S THE CRITICAL DIFFERENCE.

The Trinergy™ Cube UPS goes beyond the power revolution by hot scaling from 150 kW up to 3.4 MW in a single unit and by achieving 98.5% average operational efficiency.

Emerson Network Power introduces a new generation of the most advanced UPS technology for high availability facilities demanding mission-critical uptime and maximum efficiency. The Trinergy™ Cube UPS offers the industry's fastest return on investment, lowest TCO and highest availability, so you can have it all.

We are exhibitors at DataCentres Ireland 2016, 8th & 9th November.  
Visit our **stand 325** to discuss your requirements with the team!

## Clever Cooling Solutions

designed for data centers

With a wide portfolio of Evaporative Free Cooling options, Munters' team of data center specialists can provide comprehensive design support to data center cooling engineers.

- Comprehensive design capability
- Sophisticated design software - detailed financial and thermal performance predictions (inc. hourly energy consumption for the full year, based on predictive weather data).
- Configurable systems
- Available for retrofit and new build
- Proven installations across the globe
- DataDek Evaporative Pads - an advanced version of the GlasDek evaporative cooling pads

### TALK TO US ABOUT

- Data Center Cooling
- Indirect and Direct evaporative cooling solutions
- Make-up air and humidity control systems
- Energy efficiency
- Selection software
- Testing & Service and support

**Aggreko Ireland**

Clonminam Industrial Estate, Portlaoise, Co. Laois Ireland  
 Tel: +353 (0) 57 866 3233 Email: [ukmarketing@aggreko.co.uk](mailto:ukmarketing@aggreko.co.uk)  
 Web: [www.aggreko.co.uk](http://www.aggreko.co.uk)

Aggreko provides rental power and temperature control solutions for data centres across the world. With our technical capabilities and 24/7 service, we support all types of planned and emergency data centre projects. These include the design, commissioning and installation of data centres, operational upgrades and contingency planning for emergencies.

We offer a 24/7 365 operation, specialist engineering teams and an extensive fleet of power and cooling equipment. This ensures your rental requirements can be delivered and installed in the shortest possible time-frames to prevent operational disruption. Aggreko also offers specialist loadtesting services to thoroughly test your power supply systems. We provide a turn-key solution, including engineering, commissioning and operational support. As well as a highly experienced customer services team based at our National Rental Centre, our equipment sets industry standards for quality and performance, giving you peace of mind that you have chosen the best.

With continued global reliance on information technology, the importance of maintaining Data Centre's at optimum performance has never been greater. Managers cannot afford to be without reliable power and temperature control as storage capacities and data volumes continue to rise.

**Stand No: 211**
**Bord na Mona Plc**

Main Street, Newbridge, Co. Kildare, W12 XR59, Ireland  
 Tel: +353 (0) 4543 9146 Email: [info@bnm.ie](mailto:info@bnm.ie)  
 Web: [www.bnm.ie](http://www.bnm.ie)

In a world where our needs are increasingly complex, and energy production, waste disposal and environmental conservation are all interconnected like never before, Bord na Móna has a pivotal role to play. Bord na Móna is not just about peat or wind, we're about innovation and problem solving. At the heart of Bord na Móna is the ability to take something ordinary and make it better, make it useful. We have a deep rooted drive to make the most of our natural resources and to deliver more sustainable solutions for the benefit of the communities we serve across the island of Ireland. What we do is second nature to us. We are naturally driven.

Established in 1934 as the Turf Development Board, renamed Bord na Móna in 1946, the Company committed itself over 80 years ago to delivering sustainable industry to Ireland using indigenous resources. Moving to environmentally friendly renewable energy sources is imperative and we intend to lead that change with the transition to peat free electricity generation by 2030. We see this as an opportunity to provide energy security for the future. By repositioning and restructuring, we will ensure the future success and sustainability of our business for the benefit of all our key stakeholders – customers, suppliers, employees, communities and the State.

Transformation will be driven by new uses of our landbank. Our focus is on developing businesses with an understanding of the need to work in harmony with the natural environment and guided by our sustainability principles – economic, social and environmental. Bord na Móna is committed to innovation, sustainable growth and providing energy security for decades to come.

**Business Solutions Magazine**

616, Edenderry Business Campus, Edenderry, Co. Offaly,  
 R45 TD37, Ireland  
 Tel: +353 (0) 46 977 3434 Email: [ronan@boxmedia.ie](mailto:ronan@boxmedia.ie)  
 Web: [www.businesssolutionshub.com](http://www.businesssolutionshub.com)

Business Solutions magazine has established itself as a valuable source of news and information for senior management within business in Ireland. Over 6,000 key decision makers within both the public and private sector rely on Business Solutions to provide them with the latest trends and technologies, outsourcing options, design & build, managed services and data centre or large computer room management. Business Solutions informs IT Directors, MD's and CEO's up to date with all the important changes, challenges and developments within cloud computing, managed services and data centre's within Ireland.

Business Solutions magazine is an editorially independent publication written by an editorial team with years of experience in this sector. The publication is written by acknowledged experts in their fields and provides IT Directors, MD's & CEO's with an insight into the latest technologies and services available within:

- Cloud Computing
- Managed Services
- Data Centre's (Colocation)
- Small 2 Medium Server Rooms

 Web: [www.butlertech.ie](http://www.butlertech.ie) & [www.viavisolutions.com](http://www.viavisolutions.com)

Butler Technologies in conjunction with Viavi Solutions, will be presenting the following solutions for Data Centres :-

- Copper Certification and Fiber Certification
- Fiber test Tools
- Fiber monitoring solutions
- Hybrid-IT monitoring tools
- Best-in-class All-Packet capture solutions
- Network traffic analysis with Deep visibility & finely-tuned analysis of cloud-hosted resources

Come talk to us about the latest Fiber testing standards, how to test and turn up 10/40/100Gig infrastructure, through to network analysis of hybrid IT infrastructure across the cloud. Butler Technologies are Viavi's Elite Partner for Ireland providing the highest standard of end-to-end test, certification, monitoring and troubleshooting solutions across the network.

**Cham Ltd**

Concentration, Heat and Momentum Limited, Bakery House, 40 High Street, Wimbledon Village, London, SW19 5AU, UK

Tel: +44 (0) 20 8947 7651

Email: [phoenics@cham.co.uk](mailto:phoenics@cham.co.uk)

Web: [www.cham.co.uk](http://www.cham.co.uk)

CHAM develops and applies the computational fluid dynamics (CFD) software, PHOENICS, for the simulation of heat transfer and fluid flow processes. Formed in 1976, CHAM provides software and consulting services worldwide. CHAM has created DC-Optima specialist software for modelling datacentres, to enable datacentre designers and operators to predict accurately the air and heat distribution throughout the datacentre. DC Optima provides the necessary tools to define quickly the equipment layout and ventilation configuration, and their operational parameters, to run both steady-state and time-dependent simulations that will ascertain its performance under normal operation, as well as load variation and system failure conditions.

Web: [www.chubb.ie](http://www.chubb.ie)

**Chubb Fire & Security Protecting the world**

History:

Chubb Fire & Security has its roots dating back to 1818.

Brothers Charles & Jeremiah Chubb invented the Detector Lock whose design and construction has remained largely unchanged in 200 years.

In 1917 Walter Kidde began experimenting with Fire Detection & Extinguishing Systems establishing a business in the UK in 1935. Chubb plc was acquired by United Technologies Corporation (UTC) in 2003.

Kidde plc was later acquired by United Technologies Corporation (UTC) in 2005.

The union of Chubb & Kidde created UTC Fire & Security whose business offers an unrivalled range of dynamic fire & security solutions set for generations to come.

**Stand No: 405**
**Clarke Energy Ltd**

Unit 7, Newtown Business Park, Newtownmountkennedy, County Wicklow, Ireland

Tel: +353 (0) 1 281 0010

Email: [ireland@clarke-energy.com](mailto:ireland@clarke-energy.com)

Web: [www.clarke-energy.com](http://www.clarke-energy.com)

Clarke Energy is a multinational specialist in the engineering, installation and maintenance of reciprocating engine based power plants and gas engine compression stations. Our offering ranges from the supply of an engine, through to the turn-key installation of a multi-engine power plant. Our facilities deliver fuel efficiency and help reduce carbon emissions. Applications include combined heat and power (CHP) with natural gas, biogas, landfill gas and coal gas or high efficiency diesel-fuelled power generation. We are the largest authorised distributor and service provider for GE's reciprocating engine business.

The company's focus is on delivering quality installations, backed up with reliable, accountable after-sales support. We have a culture of integrity and high ethical standards. Clarke Energy has a dedicated, highly-trained team of sales, engineering, project management, commissioning and maintenance staff deployed around the world.

**Stand No: 214**

**Cross-Guard** (Part of Bradbury Group Ltd)  
Dunlop Way, Queensway Industrial Estate, Scunthorpe, North  
Lincolnshire, DN16 3RN, UK  
Tel: +44 (0) 17 2427 1999 Email: [info@cross-guard.com](mailto:info@cross-guard.com)

Datacenter People is the leading recruiter for the datacenter industry, helping businesses at every stage in their development to identify and engage hard to find datacenter professionals, both temporary and permanent, around the globe.

Headquartered in London but with branch offices in Singapore, Miami and Dublin, the firm handles roles from "C" level down in all disciplines including Engineering, Design, Project Management, Sales, Software Development, DCIM, Operations and Facilities Management for some of the world's largest datacenter organisations.

Our detailed knowledge of the business, and the key players and companies which it comprises, constantly updated by regular attendance at trade shows, conferences and unequalled industry intelligence will help ease you through the process of the recruitment effort to a timely and satisfactory conclusion.

**DataCentres Advice Clinic**

– Sponsored by Vincent Byrne Consulting  
4 Bushfield, Donnybrook, Dublin, Ireland  
Tel: +353 (0) 86 819 6868 Email: [vincent@byrnedixon.com](mailto:vincent@byrnedixon.com)

Vincent Byrne launched a new cloud based data centre induction service aimed at saving managers hours on training and record management. If you are a data centre manager this service will give you back all that valuable time you spend giving the same lecture on safety and procedures to each visitor to your facility. How much time could you save if all your visitors are trained before they arrive on site. Using a laptop, iPad or smartphone they can take your customised induction course anywhere, anytime. In addition through your own customised portal you can track who was trained, and retain records for ISO 27001 and ISO 9001 auditing. Don't have an induction course, don't worry, we will put one together using our easily customisable material. Visit Vincent at stand 121 and discuss how we can save you time and make your ISO auditing process easier.

**DE Power Solutions**

Clonlara Avenue, Baldonnell Business Park, Dublin 22, Ireland  
Tel: +353 (0) 1 403 4118 Email: [enquiries@dei.ie](mailto:enquiries@dei.ie)  
Web: [www.depowersolutions.ie](http://www.depowersolutions.ie)

Established in 1983 DE Power Solutions Limited, is the exclusive distributor in Ireland of KOHLER / SDMO generating sets, a market leader in emergency, prime and standby power generator installations, providing both off-the-shelf and bespoke generators. From an initial site survey and appraisal, we can provide our customers with a complete electrical turnkey package, offering the full range of on-site power services including: delivery, installation, testing, commissioning and on site personnel training. We also provide an annual planned generator maintenance service. This facility not only ensures that a generator is regularly run and tested but that it is also maintained to the highest standards and in accordance with the manufacturer's recommendations.

Our Power Solutions division provides service and spare parts back up for all the generators, engines and other products it distributes throughout Ireland. We maintain, service and repair all other makes of generator. We operate a comprehensive 24/7 emergency call out service, 365 days per year, backed up by our team of mechanical and electrical service engineers. Our national parts network is spearheaded by our Dublin warehouse and supplemented by our regional distribution centres.

Our ability to provide a comprehensive service countrywide, has enabled the Power Solutions division to develop a broad customer base which ranges across major industrial companies, leading financial institutions, government bodies, public utilities, medium to small enterprises and private individuals.

DE Power Solutions Limited are also sole distributors in Ireland for LISTER PETTER / HATZ / KOHLER and LOMBARDINI industrial engines. We would welcome the opportunity to discuss any aspect of the range of products and services it offers and if we can be of any assistance regarding current or future generator projects, please do not hesitate to contact us. Give me a call if you require any additional information.

*E+I Engineering is a leader in the manufacturing of electrical switchgear and power distribution systems. With facilities in Ireland, USA and UAE, E+I Engineering have experience of delivering data centre projects for major blue-chip companies across the globe.*

*E+I Engineering manufacture a range of intelligent data centre infrastructure including:*

- iMPB - a modular busbar system engineered for rack power distribution.
- LV Switchgear - E+I Engineering's range of fully-customisable low voltage switchboards and switchgear is the most compact and flexible type tested LV assemblies in Europe.
- Modular Power Skids - Fully assembled switchgear, UPS systems and PDU electrical schemes are pre-mounted and fully tested in our facilities. This enables rapid deployment of power on site, dramatically reducing lead times, improving quality and ensuring an overall reduced cost.
- Powerbar - E+I Engineering manufacture a complete power distribution solution with busbar available in ratings up to 6400A.

## ESB Innovations

ESB Head Office, 27 Lower Fitzwilliam Street, Dublin 2, DO2 KT92, Ireland

Tel: +353 (0) 1 676 5831 Email: [info@esb.ie](mailto:info@esb.ie)  
Web: [www.esb.ie](http://www.esb.ie)

Electricity Supply Board (ESB) was established in 1927 as a statutory corporation in the Republic of Ireland under the Electricity (Supply) Act 1927. With a holding of 95%, ESB is majority owned by the Irish Government. The remaining 5% is held by the trustees of an Employee Share Ownership Plan.

As a strong, diversified, vertically integrated utility, ESB operates right across the electricity market: from generation, through transmission and distribution to supply. In addition, ESB extracts further value at certain points along this chain: supplying gas, using our networks to carry fibre for telecommunications, developing electric vehicle public charging infrastructure and more.

ESB is a leading Irish utility focused on providing excellent customer service and maintaining our financial strength. We have a regulated asset base of approximately €9 billion with 43% of electricity generation capacity in the all-island market. We currently supply electricity to approximately 1.5 million customers throughout the island of Ireland. As at 31 December 2014, ESB Group employed approximately 7,000 people.

Our mission is to bring sustainable and competitive energy solutions to all customers and our vision is to be Ireland's foremost energy company competing successfully in the all-island market.

## E-TEC Power Management Ltd

Unit A6, Bymac Centre Northwest Business Park, Blanchardstown, Dublin 15, Ireland

Tel: +353 (0) 1 820 5999 Email: [info@e-tecpowerman.com](mailto:info@e-tecpowerman.com)  
Web: [www.gb.e-tecpowerman.com](http://www.gb.e-tecpowerman.com)

E-TEC adds value every step of the way. Working closely with the consulting engineering community, E-TEC specialises in Datacenter design, build and commissioning. Using its own datacentre modelling tool - PEARL, E-TEC can create a 3D walk-through model of a proposed design and from it optimise the layout for footprint, operating cost, scalability and more.

E-TEC understands the customer's ICT business needs, and in keeping abreast of the latest innovations and trends in the ICT sector, we design effective infrastructural solutions with appropriate levels of redundancy and scalability, keeping cost, energy efficiency, up-time and future expansion potential in perfect balance. In supplying and installing equipment and project managing from start to finish.

As an Elite Partner of Schneider Electric, E-TEC offers a full range of Datacenter solutions including UPS power and distribution, racks, cooling, containment solutions, infrastructure management tools (DCIM), and raised flooring. In addition E-TEC offers its own bespoke SCADA compatible solutions, fire protection and a best-in-class in-house service team for ongoing support.

E-TEC Power Management was founded in 1999 in Ireland as a power engineering company, under parent company E-TEC Power International Ltd, and now has established bases in Ireland, UK, Netherlands, Germany and Poland.

With 16MW of load, Heatload is the leading provider of heat load and server emulators for testing datacentres; on sale, rental, installed or fully managed. Supplying to the UK, Europe. With a variety of load types: 2&3kw Single-phase and 9, 15 & 22kw 3-phase floor standing and 2kw & 3.5kw Single-Phase 3u Rack Mounted. 3-Phase units are supplied with 5m leads with 5-pin 32Amp commando plugs. Single-phase units are supplied with 2m leads with C20 plug; adapters to connect to C13, UK 3-pin, 16 or 32Amp Single phase commando sockets. 3-Phase and Single phase power distribution is available. Heatload's rack mounted units were designed in partnership with the end users, mechanical and electrical consultants and IT consultants to closely replicate the characteristics of IT equipment. Units are manufactured in the UK. Units are delivered in Correx® boxes to reduce contaminants introduced into the datacentre. If the IT racks are not yet implemented, Heatload can provide 32u racks, on casters. Temporary blanking panels can be fitted to customer IT racks reducing air recirculation. Heatload can supply temporary temperature and humidity data loggers for use during testing. Installation, monitoring and un-installation works are covered by Method Statements, Risk Assessments and only carried out by fully trained, datacentre aware, experienced staff. Before dispatch, all equipment is cleaned, PAT tested and any repairs completed; ensuring all units are safe and fully operational.

Munters is a global provider of energy efficient air treatment systems with over 350,000 air treatment systems installed worldwide, offices in 30 countries and over 3000 employees. We are the leading international provider of evaporative air cooling, temperature and humidity control solutions. Our products include systems for industry and commercial buildings which can make energy savings of up to 75% in comparison to conventional building air treatment energy costs whilst improving the indoor air quality. With a wide portfolio of Evaporative Free Cooling options, Munters' team of data centre specialists can provide comprehensive design support to data center cooling engineers and installations include a wide variety of data centres across North America, Europe, Asia and Australasia. When it comes to Data Centres, Munters currently cool over 190MW of rejected heat while achieving low partial PUE results, CO2 emissions & high energy savings.

## Precision Cables Ireland

Mulholland, Avenue, Co Louth, Ireland

Tel: +353 (0) 42 933 1436 Email: [info@precisioncables.ie](mailto:info@precisioncables.ie)

Web: [www.precisioncables.ie](http://www.precisioncables.ie)

Precision cables was established in 1980, we are the exclusive distribution channel for draka Uc Connect Lan connectivity solution. Cable solutions to support the development of the worlds infrastructure are of massive importance in the industry we are in. As the world's largest producer of telecoms cables, supporting the infrastructures of many of the world's leading telecoms operators, prysmian group delivers optical fibre and copper cabling solutions that help link communications to communities through data centres around the globe. We offer our own fully owned technology when it comes to fibre optics, our bend bright OM4 design have been a success in the data centre environment. With 40/100 gigabit-Ethernet infrastructures rapidly emerging as the next standard, the draka product range has been extended with a cable program with UC FUTURE cable that meets current requirements regarding packing density in data-centre and will facilitate the move to next-generation 40/100gigabit Ethernet. This includes cat8.x solutions for forthcoming 40GBase-T interface.

Server Technology's power strategy experts have provided power solutions for labs, data centres, and telecommunications operations for 30 years. Over 60,000 customers around the world rely on our rack power distribution units and award winning power management solutions to reduce downtime, facilitate capacity planning, improve energy utilization, and drive efficiency. With the best quality rack PDUs, best technical support and most patents in the industry, Server Technology products provide uncompromising reliability, innovation, and value for the data centre. Only with Server Technology will customers Stay Powered, Be Supported and Get Ahead.

**Stand No: 204**
**SSE Airtricity**

Red Oak South, South County Business Park, Leopardstown,  
Dublin 18, Ireland

Tel: +353 (0) 1 655 6000

Email: [contractsales@airtricity.com](mailto:contractsales@airtricity.com)

Web: [www.sseairtricity.com](http://www.sseairtricity.com)

At SSE Airtricity we're proud to make a difference. From small beginnings we've grown to become Ireland's second largest energy provider, supplying greener electricity and natural gas to around 800,000 homes and businesses on the island, or 20 per cent of the total combined gas and electricity markets here.

We're proud too to be making a difference to the future of Ireland's energy supply. As part of SSE plc, we have invested over ?2 billion, or around ?1 million a day, since 2008 in growing our energy business here – creating jobs in Ireland, sustaining employment, driving competition and greening our economy.

SSE Airtricity is Ireland's largest provider of 100 per cent green energy. In 2015, all of the electricity we supplied to our home and business customers (5.3 TWh\*) was from 100 per cent green energy sourced by SSE Airtricity, significantly abating over 2 million tonnes of harmful CO2 emissions on the island.

In energy generation, we now own and operate 1836MW of generation capacity, of which almost 550MW is from 25 wind farms across Ireland. We're also building the 174MW (SSE share 120MW) Galway Wind Park in partnership with Coillte – when completed in 2017 it will become Ireland's largest wind farm.

We've commissioned Ireland's newest and one of its cleanest power plants – the new 464MW Great Island CCGT unit (grid connection capacity set at 431MW) in Co. Wexford which can generate enough energy to power over half a million Irish homes. Coinciding with the retirement of the old 240MW heavy fuel oil unit at the same site, the transition to gas has improved the carbon intensity of SSE's fleet and significantly decarbonises energy generation in Ireland. In addition, SSE estimates that Great Island will save Irish energy customers in excess of ?50 million per year as one of Ireland's most efficient power plants, and it will provide additional savings when full grid access is delivered.

At SSE Airtricity we adopt a responsible approach to managing our social, environmental and economic impacts to ensure the long-term viability of the business. In addition to being Ireland's largest provider of 100 per cent green energy SSE Airtricity is also the third largest financial contributor to charities and community groups in Ireland – in 2015, we donated more than €1 million to local projects and good causes, as well as volunteering over 3,500 hours?.

SSE was the first large corporate business in Ireland to become a Living Wage employer – from 1 January 2016 SSE guarantees all its employees a Living Wage of at least €11.50 an hour.

\*Total GWh supplied to homes and businesses based on Electricity Market Share by MWh published by the Commission for Energy Regulation (CER) in Retail Market Reports for the periods Q1-Q4 2015. Quoted CO2 emissions abated based on Average CO2 Emissions (t/MWh) in 2015 in the All-Island Single Electricity Market, and published by the CER in its Fuel Mix Disclosure and CO2 Emissions for 2015, August 2016. ? Business in the Community Ireland (BITCI) Business Impact Map 2015.

FRIEDHELM LOH GROUP

# Over 50% of Irish Businesses suffered at least one data breach in 2015

55% of Irish organisations have seen company data stolen, hacked or otherwise compromised largely due to “negligent employees”. Are you protecting your data?

In Ireland information security is now a serious threat for Irish businesses with two in five now rating external hacking as one of their top three IT threats, according to a survey by Irish Computer Society. A third of Irish firms say they have seen sensitive data slip out once in 2015, while a further 22% say it has happened multiple times in the same time period.

A big issue which Irish organisations have is that they are simply unaware if they have been hacked. According to the survey a quarter are unaware if they have let sensitive data slip out. A common reason for this is down to a lack of training and policies being implemented within an organisation. Based on this survey, 41% of those who are made responsible for data protection issues within companies have had insufficient or no training. Furthermore, over 25% of Irish companies have taken no measures to protect against external data breach threats or are “not sure” whether they have done so.

The survey also revealed that companies are unclear about who is liable if a breach occurred. 41% of Irish company executives say that they would face official sanctions in the case of a data breach, while 58% say there would be no sanction or they were unaware of such sanctions.

This should now become more clear with the introduction of new EU legislation called General Data Protection Regulation (GDPR). This will be the first legislation that will apply to all countries that process data of EU residents. The GDPR states by May 2018 any organisation that holds EU client’s data and do not acknowledge a breach will face fines up to 20 million euro.

Currently, just 65% of Irish executives say that their firm had an official data breach policy. Meanwhile, over a third of Irish companies are “not confident” that staff know what procedures to follow in the event of a data protection incident. This means that organisations based in Ireland across Europe need to begin

implementing information security policies that show they’re actively protecting their client’s data.

Based on the statistics it is clear human error plays a factor when data is compromised. To prevent data breaches from occurring organisations are now implementing information security frameworks that will allow transparency for all staff to ensure best practices are maintained resulting in a secure system for data.

One such system is ISO 27001 Information Security Management System. This is a globally recognised best industry standard, which provides organisations with a framework to ensure best practices are being incorporated and maintained. This can be adapted to any organisation regardless of size, or number of locations. The standard also provides a framework on how best to manage a data breach if it occurs.

From our experience of working with client’s that implement systems like ISO 27001 and go for certification, having a management system in place provides confidence assurance certainty to clients, employees and stakeholders alike that you are managing the risk of future security breaches to the highest industry standards.

Also, with the newly introduced GDPR coming into effect, ISO 27001 certification will help your business comply, plus any further Information security legislation.

If you would like to learn more about ISO 27001 and how it can be adapted to suit your company’s needs, speak to one of our advisors.

# open eir and Aqua Comms agree multi-year deal worth more than €5m

The deal will enable open eir to provide a high-capacity fibre link to connect Aqua Comms' transatlantic AEConnect cable system to data centres in Dublin.

- open eir to provide dedicated high capacity fibre connection from Killala to Dublin for Aqua Comms Ltd
- Data centres in Ireland, the UK and US will enjoy increased high-speed interconnectivity across this 350 km link
- A vital link in a major route between North America and Europe, as part of Aqua Comms' transatlantic cable serving social media, cloud and telecoms companies based in Ireland and abroad
- Investment enhances Ireland's proposition as a destination for major global data centres and ICT companies

open eir, Ireland's largest wholesale communications services provider, has been chosen by Aqua Comms to provide an ultra-high capacity fibre link to connect Aqua Comms' transatlantic AEConnect cable system to bandwidth-hungry data centres in Dublin.

The fibre provided by open eir is a fundamental building block for the Aqua Comms network, providing ultra-high capacity, transatlantic data-centre-to-data-centre connections for some of the world's leading social media, cloud and telecoms companies. As a result, data centres in Ireland, the UK and US will enjoy increased high-speed interconnectivity.

The multi-million-euro deal enables Aqua Comms to connect its \$300M, 5,536km transatlantic subsea cable system to Dublin data centres from its Killala cable landing station through this 350km terrestrial fibre connection. From Dublin, the system links to the existing Aqua Comms Irish Sea Fibre network, CeltixConnect, and on to Wales and major data centres in London. On the US side, the cable landing station connects to major data centres throughout New York City and New Jersey.

open eir's connectivity provides one of the diverse routes across Ireland and reinforces AEConnect's position as the most reliable and secure transatlantic cable system. Its unique levels of subsea reliability are achieved by avoiding major fishing grounds and shipping anchorage areas, as well as minimising the length of

open eir to provide high capacity fibre connection from Killala to Dublin in Aqua Comms deal worth more than €5m. Pictured at the announcement are (L-R): Martin Reilly, vice president of sales, cloud and content, Aqua Comms; and Adrian Marron, Head of Sales & Service Management, open eir.

route in shallow water areas on the continental shelves. Along with its highly secure routing, AEConnect also delivers some of the highest transatlantic optical capacity able to eliminate slow bottlenecks that have existed in the past..

Martin Reilly, vice president of sales, cloud and content, Aqua Comms, said: "We are seeing a surge in bandwidth demands from data centres, cloud networks, financial services companies, carriers and content providers on AEConnect.

"We needed a flexible and responsive terrestrial wholesale partner that could provide the fibre capacity, reach and security to reliably connect the cable landing station in Killala to our data centre locations in Dublin. As our customer needs expand, we require the ability to scale the network capacity. open eir's proposition met our needs and they were able to complete the work ensuring Aqua Comms' challenging timescales were satisfied."

Speaking about the agreement, Adrian Marron, Head of Sales & Service Management, open eir, said: "Dublin is already home to one of the largest clusters of data centres in Europe. Several IT multinationals currently have vast data centres under construction here as an increasing number of US companies view Ireland as a key entry point to access large European markets.

"By partnering with open eir, Aqua Comms' customers are guaranteed one of most secure and fastest transits from major Dublin-based data centres to New York, London and Europe. We are delighted to provide such a key link in this fantastic infrastructure that bolsters Ireland's reputation as one of the best locations to build data centres."

## About Aqua Comms Limited

Aqua Comms Limited (Aqua Comms) is the owner and operator of the transatlantic cable AEConnect and the Irish Sea cable CeltixConnect, and was established to build, acquire or merge with subsea fiber optic cable networks to provide capacity networking solutions to the global media, content providers and IT companies. To learn more about Aqua Comms and its new transatlantic subsea cable system, AEConnect, visit [www.AquaComms.com](http://www.AquaComms.com).

## About open eir

Open eir is the wholesale division of eir. The division is the largest wholesale provider in Ireland with more than 40 operators using the network.

eir is the principal provider of fixed-line and mobile telecommunications services in the country. The company has the most extensive fixed and mobile network in Ireland and provides a comprehensive range of advanced voice, data, broadband, TV and ICT services to the residential, small business, enterprise and public sector markets.

The company has over 3,000 full time employees. The cornerstone of the company's current €2.5 billion strategic investment programme is the construction of Ireland's largest fibre broadband network that will reach 1.9 million homes and businesses by the end of 2020 using FTTC and FTTH technologies.

# High energy efficiency and safety with Munters Oasis™ cooling system

Net-Build® GmbH in Saarwellingen, Germany, was founded in 1999 by Mr. Patrick Bohn. Providing IT services as System Management, Business Solutions and Rack Hosting, the company today has 20 employees.

**T**he increasing data traffic and demand for storing and protection of data in general, recently created a need for extending Net-Build's Data Centre capacity. Managing a visionary and environmentally conscious company, Mr. Patrick Bohn was looking out for new and energy efficient solutions when he decided to build a new state-of-the-art Data Centre.

In the planning phase, Net-Build partnered with the local contractor E-TEC Power Management GmbH, that supplies turnkey Data Centre solutions with the highest attention on safety and energy efficiency. Together with Munters, E-TEC worked out an energy efficient cooling solution, based on Munters' indirect evaporative cooling system Oasis™.

## Providing first class services

Located exactly on the Internet connection line from London to Frankfurt, Net-Build is able to guarantee their customers a fast and secure connection.

A high level of security applies to both entry control and the operation of the new Data Centre. Customers will benefit from being hosted by a Data Centre that saves the environment 107 tons CO2 per year by using the most modern technologies.

Net-Build customers are ranging from small private organisations to bigger industrial businesses and already 2 months

Mr. Patrick Bohn, Net-Build GmbH, with Mr. Anton Immerz, Munters GmbH

after the inauguration of the facility, almost 1/3 of the racks are filled with servers.

## Energy efficiency of utmost importance

Net-Build can host up to 12.000 servers in 320 racks, placed in 2 identical, (but of safety reasons separated) and mirror-handed rooms.

To prevent drop outs in case of failure in the mains supply, the Data Centre is equipped with double emergency power systems, ensuring that a break down is only a theoretical issue.

To cope with the heat load generated by the servers, installation of efficient cooling was crucial. With an IT load in the Data Centre of up to 2 MW when fully loaded, E-TEC and Munters specified 8 pcs. Oasis™ 200 units for the facility. The units were designed to be installed on the roof, directly above the hot aisles, whereby expensive duct work and loss of static pressure could be avoided.

The erection of the building was completed in only 6 months and Mr. Bohn, Net-Build GmbH, expresses his satisfaction with both the building and the cooling system:

"Our Data Center stands out by being extremely energy efficient, with a calculated PUE below 1,2.

At the same time the safety is in top, and since the Munters cooling system is running without or chilled water, the operational reliability is very high". The 8 Oasis™ 200 units placed on the roof are grouped to match the interior lay-out with 2 mirrorhanded rooms. Each section has one OASIS unit kept for redundancy.

The design condition in the server aisles is laid out for a temperature at 20°C, allowing a max. temperature at 24°C.

In case of very hot summer days, an integrated 36 kW DX chiller will start operating, which is expected to be necessary in only 4% of the time. For the remaining 96% of the year, the indirect air-side economizer based on a polymer-tube heat exchanger will supply the cold air.

The Oasis™ 200 units are placed on the roof, directly above the server aisles.

This air is led to the buildings cold aisle and distributed into the hot aisle through openings in the floor. The warm air from the servers is exhausted from ducts in the ceiling and returned to the Oasis™ units.

This principle also excludes the risk of pollution from outside air, since the air recirculates and eliminates the need of further filtration. The Oasis™ units are all connected to the facility's BMS system allowing for easy surveillance and control.

To learn more about the Oasis™ principle: [www.munters.com/Oasis](http://www.munters.com/Oasis)

# EU Parliament vote in favour of climate change agreement

European Union move a big step forward in tackling climate change but what does this mean for Irish businesses?

Last month the European parliament voted overwhelmingly to approve the Paris Climate Change Agreement which was first brokered in late 2015. The vote allows the agreement to be ratified by the European parliament which was agreed upon by 195 countries at the Paris climate change conference (COP21) in December 2015. The agreement sets out a global action plan to put the world on track to avoid dangerous climate change by limiting global warming to well below two degrees.

## What does this mean for Ireland?

As part of the Paris agreement, Ireland has committed to reduce greenhouse gases by at least 40% by 2030. At the time Minister for the Environment Alan Kelly said "the Paris Agreement sends an unequivocal message to business, stakeholders and citizens that all Governments are committed to playing their part in addressing the challenges posed by climate change".

Legislation like this has positioned Ireland as a global leader in relation to tackling climate change. Ireland has long been at the forefront of developing initiatives that allow organisations both in public and private sectors to not only reach new levels of energy efficiency, but also become more financially stable which allows for growth, new jobs and profits. A recent example of this was the introduction of Ireland's first ever climate change legislation, the Climate Action and Low Carbon Development Act 2015. The legislation is designed to continue the process of pursuing a transition to a low carbon and climate resilient economy.

## What does your organisation need to do?

The pathway to reaching these new energy targets set out in the Paris agreement and in fact any future EU energy targets will simply come down to how best to manage your organisation's energy usage. The answer for many Irish companies in recent years has been to integrate an energy management system that can be followed by all staff and improve operational efficiency across the organisation.

By implementing an ISO management system some of the benefits include becoming more economically efficient due to the high energy savings, plus an improved corporate image and credibility among stakeholders and clients both existing and potential in the public eye.

ISO 50001 provides a framework for establishing energy management best practices to help organisations improve their energy efficiency in a logical, controlled and systematic way. The purpose of the International Standard is to enable organisations to establish the systems and processes necessary to improve energy performance, including energy efficiency, use, and consumption.

Certification Europe have certified a wide variety of organisations to the energy standard, in 2016 alone Public Authorities, National Universities, companies in Tech and Food & Beverage sectors have all switched to ISO 50001 with huge returns both from a financial and environmental point of view.

The Paris agreement set new targets which can seem daunting to achieve, however, by implementing an energy management system such as ISO 50001 this will provide the best path forward to success. Within twelve months of implementation organisations on average see a reduction of 10-15% of greenhouse gas emissions. The long term benefit of ISO 50001 is that it provides the opportunity to continuously improve and can be adapted to ensure energy targets can be hit by the 2030 deadline.

If you would like to know how your organisation can benefit from ISO 50001 contact Certification Europe by phone 01 642 6300 or visit our website [www.certificationeurope.com](http://www.certificationeurope.com)

# Ireland's big Red Cloud and Westcoast partner in deal set to be worth over €2m over 8 years

Big Red Cloud, Ireland's leading supplier of accounting software to SMEs, have signed an agreement with , the largest IT distributor in the country. The deal will see Westcoast, who have a network of over 600 resellers throughout the country, distribute Big Red Cloud to all reseller customers – who will then be able to sell it on to a variety of small to medium sized businesses nationwide. Big Red Cloud forecast the deal to be worth over €2million in revenue to the business over the next 5 – 8 years.

Announcing the partnership, Marc O Dwyer, CEO of Big Red Cloud,

"This is a huge development for us and something we've been working towards for some time. In terms of our target market Westcoast is a perfect fit as a partner to distribute our product –

not only is it the largest IT distributor in Ireland, but it has a stellar reputation and is held in high esteem by those within the sector. They work with top brands such as Microsoft, HP, Lenovo, Apple and Aruba, and they also have 5000 partners in the UK – so it is a trusted organisation with which we are proud to be associated"

Big Red Cloud say that, based that on their forecasts, this partnership will results in over 1,000 new Big Red Cloud customers per annum. The deal comes on the back of Big Red Cloud's relationship with Microsoft who facilitated the introduction.

Big Red Cloud say they now have a very strong foothold in the Irish market but they have no plans to slow down.

# The engine powering Ireland's most successful companies

US headquartered Sungard Availability Services is the Dublin-based company that provides critical IT production and recovery services to some of Ireland's best-known, most successful names.

**T**hese leading companies recognise that in today's non-stop business world, without highly available IT, their organisations simply could not function or deliver the promises their customers demand of them. Sungard AS is the technology partner they rely on to enable them to keep those promises.

## FUJIFILM

FUJIFILM, for example, must ensure the images at the heart of its business are always readily accessible. Its popular Imagine product allows people to print their digital photos on a variety of items including photo books, mugs, coasters, clothing and keyrings to make personal gifts and mementoes. If consumers were unable to instantly access their photos the service would grind to a halt and FUJIFILM's reputation would suffer irreparable damage. High availability around the clock is critical.

Consequently, FUJIFILM stores its images on a private cloud provided by Sungard Availability Services, which comes with a Service Level Agreement-backed commitment to 99.99% availability. The technology platform also gives FUJIFILM the scalability and flexibility it needs to fulfil its worldwide expansion ambitions.

## Brandtone

Mobile marketing specialist Brandtone's business centres on successfully exploiting the ubiquity of mobile phones to promote its clients' brands and produce a measurable return on their marketing investment. As this involves engaging with over a billion consumers worldwide Brandtone needed a secure, segregated and scalable cloud service to host the huge databases of shoppers' details acquired through its campaigns.

Brandtone relies on Sungard AS' enterprise-class Managed Private Cloud platform, which provides a robust environment for its systems and extremely valuable data. Resilience is assured through global load balancing, multiple internet carriers, managed firewall, two-factor authentication and DDoS attack mitigation solutions.

The flexibility of the Sungard AS cloud environment has been crucial in accommodating Brandtone's phenomenal growth rate. Each component of the resource pool is individually flexible – from available processors, memory and storage to number of instances and bandwidth.

## MicksGarage.com

As for online car parts supplier MicksGarage.com, its business is as much about technology as the spare parts it sells. With more than 6.5 million product listings on offer and

customers needing their spare parts urgently, the firm's success hinges on the speed and reliability of its IT infrastructure and streamlined business processes.

Sungard AS provides a resilient, multi-tenant cloud solution that gives the firm the high availability and scalability it needs to manage the complex logistics operation. Two enterprise cloud servers with load balancing and a redundant physical server ensure there is no single point of failure and enable the firm to cope with sudden spikes in demand.

Other prospective providers were fazed by the difficulty posed by managing (and recovering if necessary) a hybrid environment consisting of both physical and virtual servers. However, our heritage in recovery and continuity – amassing more than 35 years' experience of keeping customers' critical systems up and running – means whatever scenario customers face, we are likely to have seen it before.

We take a business outcome-focused approach that starts with understanding the customer's business and then working with what they have. It's an approach valued by our many Ireland customers who also include multistore gift card One4All, the web-based Hibernia College and the Royal College of Physicians in Ireland.

## Channel Partner Program extended into Ireland

Sungard AS has recently extended its highly successful Channel Partner Program across Europe. The multi award-winning programme operates as a collaborative selling model in which Sungard AS works alongside our partners to provide joint customers with complete solutions, thus helping them meet growing demand for 'as a service' delivery models and Opex financing.

Carefully selected partners have a choice of several tracks that allow them to offer Sungard AS cloud, cloud recovery and managed application solutions, plus a host of hybrid IT offerings to their customers and thus build an ongoing revenue stream. Prospective partners can find out more at [www.sungardas.ie/partners](http://www.sungardas.ie/partners)

# Rural Ireland has a huge economic opportunity, says Google chief

Harris was speaking ahead of National Digital Week which coincides with the second call of the Skibbereen-based Ludgate seed capital fund, valued at €450,000.

National Digital Week aims to develop entrepreneurship by making digital accessible for all, and is the only event of its kind in a non-urban area in Ireland.

Between 10 and 12 November, some 1,600 entrepreneurs, digital marketers, technology enthusiasts and those embarking on a digital journey will descend on Skibbereen in Cork.

National Digital Week 2016 is attracting over 80 speakers including Ben Verwaayen, former CEO of Alcatel-Lucent and founding partner of Keen Venture; Mark MacGann, senior board advisor at Uber; David Puttnam, Ireland's Digital Champion and Oscar-winning film producer; Gráinne McCarthy, London Bureau Chief at Wall Street Journal; and Ronan Harris, VP of Sales at Google EMEA and head of Google Ireland.

Established in 2015, the 10,000 sq ft Ludgate digital hub at the refurbished Old Bakery building is to create 500 new jobs over the next five years, with an initial 75 or more jobs guaranteed in the start-up phase.

"At Google, we believe that there is a huge economic opportunity for rural Ireland as more and more people build successful businesses online," said Harris, who recently described Ireland as the data capital of Europe.

"Skibbereen is leading the way and we're delighted to bring the Google stage to National Digital Week. We've gathered together some of Ireland's leading online entrepreneurs to share their insights, and the Google stage will be a hive of innovation

**'At Google we believe that there is a huge economic opportunity for rural Ireland as more and more people build successful businesses online'**

– RONAN HARRIS

Geography is no longer a restricting factor as long as Ireland continues investing in future proofing broadband connectivity. Loch Hyne The digital economy is a major opportunity to supercharge rural Ireland, according to the head of Google Ireland, Ronan Harris.

and inspiration for entrepreneurs looking to expand their businesses on mobile and using YouTube."

## Gigabit society

Opened in July, the Ludgate Digital Hub is the first rural hub to receive a 1Gbps provided by Vodafone, as the town is connected to Siro's 100pc fibre-optic broadband network.

"Vodafone is focused on and committed to delivering a 'gigabit society' in Ireland; where access to 1Gbps broadband speed is accessible, regardless of where in the country a person lives," Vodafone Ireland CEO Anne O'Leary explained.

"The benefits of connectivity through high-speed broadband to homes and businesses countrywide is huge in terms of bridging the urban/rural digital divide and facilitating economic recovery," said O'Leary, who will be speaking at National Digital Week.

# Black Duck Software forms Open Source Security Research Group in Northern Ireland

Black Duck, a global leader in automated solutions for securing and managing open source software, has announced the formation of its Belfast-based Open Source Security Research Group during an event at Invest Northern Ireland's headquarters in Belfast.

Black Duck worked closely with Invest NI on the initiative, and Black Duck said it expects to add almost 60 jobs in Northern Ireland over the next four years.

The Northern Ireland group is a component of Black Duck's global Center for Open Source Research and Innovation (COSRI).

COSRI is based at Black Duck's Massachusetts headquarters. The Northern Ireland group will play a major role in COSRI's research work by analyzing open source security issues and attack patterns, and by providing customers with actionable information on vulnerabilities, corrective actions to reduce risk and strategies for effective, secure use of open source.

Black Duck CEO Lou Shipley attended the event and said "Since creating COSRI earlier this year, we have been increasing our strategic investments in open source security research and innovation worldwide. Northern Ireland has the depth of security research talent to meet many of our needs in the near term and in the future.

"Invest NI very quickly proved to us that Northern Ireland had both the high-quality tech professionals to meet our open source security research needs and an impressive array of cybersecurity-focused businesses that will continue to attract more attractive candidates to the region. Invest NI's guidance and support played a vital role in making this engagement happen. They will be a key strategic ally as we scale our research

activities, grow our business and support Black Duck customers in the UK and Europe," said Shipley.

Simon Hamilton, Northern Ireland's Minister for the Economy, praised Black Duck's investment and said "Our local software industry is fueled by a pool of high-quality software engineers working in a range of leading technology disciplines. In recent years Northern Ireland has made significant investments in cybersecurity research and in growing computer science student numbers at both Queen's and Ulster universities. We also have a growing cluster of world-class companies involved in cybersecurity, making Northern Ireland a very attractive location for projects of this type."

Use of open source software is ubiquitous worldwide and it is an essential component in application development today, often comprising 50 percent of the code in an application. The rapid growth in open source usage has created significant security and management challenges.
